

ASC-10: Spraying & Spreading control

The Topcon ASC-10 auto section controller provides ten-section sprayer or spreader control and handles point rows or triangular-shaped fields with ease.

10-30 section control for spreading or spraying

Within ten-section sprayer or spreader control, the ASC 10 handles any challenge with ease - even point rows or triangular-shaped fields.

The ASC 10 automatically switches sections on and off as you cross previously applied areas, move outside field boundaries or cross exclusion zones.

Eliminate gaps and overlaps and reduce inputs while protecting your crops. The liquid rate control keeps application rates constant even with varied vehicle speeds. Additional ASC-10s can be stacked or connected to provide up to 30* section control.

10-30* section control

Automatically switches section on and off

Eliminate gaps and overlaps

Reduces inputs

*10 sections require 1 x ASC-10 unit
20 sections require 2 x ASC-10 unit
30 sections require 3 x ASC-10 unit

State-of-the-art sprayer control starts with topcon consoles and horizon software

Both X30 and X25 consoles offer full-featured sprayer control and data management with exclusive Topcon Horizon software interface. Horizon is intuitive to learn, easy to operate, and allows users to customize views to fit their specific operation.

CM-40 Control Module (Apollo Sprayer)

ISO11783 compliant with multiple encoder, digital and analog inputs. It can control up to 1 independent application control channels and provides up to 16 configurable valve outputs.

EM-24 Control Module

Designed for additional section control expanding from the CM-40 with up to 40 inputs and 24 outputs.
