

GUIDE 10

Smarter Guidance, Better Crops

Accurate and upgradeable manual guidance system

Tough as nails display

Simple, plug-and-play GNSS antenna

High-sensitivity IMU sensor

Rear Camera

The Guide 10 is the next-gen manual guidance system that helps you steer your tractor or sprayer dead straight while plowing, planting, or spraying. That means fewer misses, fewer overlaps, and better crop yield and quality — simple as that.

With its IMU sensor, Guide 10 compensates for uneven ground, keeping your lines true even in the trickiest paddocks. It works with pretty much any make or model of ag vehicle, so it's a versatile tool for all your farming jobs.

Thinking long-term? Guide 10 is scalable — start with manual guidance now, and when you're ready, upgrade to a full GNSS RTK autosteering system without wasting your investment.

In short, Guide 10 helps you save on inputs, lift your yields, and make every hour in the paddock count. It's the smart choice for Kiwi farmers looking to get more out of their land and machinery.

Benefits and Performances

Easy-to-Use, Feature-Rich Software

The Guide 10 software makes tractor navigation simple, straight-forward, and packed with features. Choose from multiple guidance patterns — AB line, A+ line, curve line, or circular curved line — whatever suits your paddock and task.

The Landmark Point feature is a clever little tool that marks obstacles like trees, rocks, or other hazards, helping you avoid them and keep your crops and gear safe. A virtual light bar on the screen shows deviations from your desired path in real time, so you can adjust on the go.

Export work logs to track areas covered, average speed, and other useful info — perfect for analysing your farming practices and making your operation more efficient and profitable.

Rugged, Innovative 10-Inch Display

The 10.1" colour touchscreen is simple to navigate and easy to read, even in bright sunlight. The display is built tough for farm life — able to handle shocks, vibration, dust, and mud — so you can rely on it, no matter what the paddock throws at you.

Enhanced Guidance Performance with IMU Sensor

With high-sensitivity IMU terrain compensation, Guide 10 keeps your tractor on track even in rough or uneven fields. Pass-to-pass accuracy improves, giving a smoother, more reliable ride and helping you cover ground precisely and efficiently.

Upgrade to RTK Autosteering When You're Ready

Start with manual guidance now, then easily upgrade to full RTK auto-steering when the time's right. Just add the electric wheel and switch your display to GNSS RTK functionality — and your Guide 10 turns into a complete autosteering system with centimetre-level accuracy.

It's an easy, cost-effective way to protect your investment while giving you the precision and control you need, exactly when you need it.
