

TOPCON

Value Line Steering

Big Farm Technology. Small Budget Prices.

Elevate your farming efficiency with cutting-edge autosteering technology designed for farms and budgets of all sizes.

With Value Line Steering, experience proven precision and ease of automatic steering for your front wheel assist and front wheel steer tractors.

Value Line works with nearly every brand machine, making it the perfect for your farming needs. Designed for reliability, it's affordable, user-friendly, and backed by expert support. Enhance crop yields, accuracy, and efficiency while reducing operator fatigue.

Position-based (GNSS) automatic steering for many agricultural machines

Reliable hardware -receivers, controllers, and displays

Range of accuracy options upon operational needs

High quality at an accessible price for every operation

Powerful steering in a straight forward package

Topcon offers flexibility. Whether it's simply steering or control of other key precision agriculture solutions, we have a clear path to guide you there. Through Value Line Steering, you get access to any steering pattern you need, plus more advanced features including Steer to Boundary, Guidelock and Headland Turns. Even control basic ISOBUS implements through ISOBUS-UT functionality.

1

Modern Touchscreen Console
XC1 plus (10" display)

2

Reliable GNSS Receiver
XR-1

3

Powerful Electric Steering Wheel
XW-1

Maximise productivity

Reduce fuel & maintenance

Minimise operator mistakes

Optimise application inputs

Operate 24/7

Maximise precision

Virtual Wheel Angle Sensor

To reduce system costs and simplify setup, we've developed a new digital approach to enhance autosteering performance. Previously requiring a mechanical wheel angle sensor, Value Line Steering introduces integrated software that matches the benefits in most conditions without the need for an additional hardware installation.

Easy-to-use in-cab operating software

Topcon in-cab operating software (Horizon Lite OS) is all about efficiency and connectivity. Its easy usability makes setup efficient and operators confident.

Virtual Implement Mapping

Generates a precise digital model of the equipment in use, optimizing field coverage and minimizing waste by preventing overlaps. The auto section control feature can be used to mimic an implement with sections which must be manually switched by the operator.

ISOBUS-UT

Display compatibility for ISOBUS protocol solutions. Basic control using ISOBUS-UT functionality. ISOBUS control units can be updated through the File Server (FS) function.

Rely on our certified distributors for timely support

Beyond delivering our high quality products, our certified distributors understand the vital role of exceptional service in maximising the efficiency of agricultural guidance systems. Our agriculture-focused technicians are prepared to assist you with installations, even remotely, directly through your monitor, ensuring you achieve optimal precision.

For work that matters

Collect data and make better decisions with our cloud software, the Topcon Agriculture Platform (TAP).

Designed for farmers, dealers, agronomists, and input suppliers who need to gather and consolidate key operational information, the Topcon Agriculture Platform (TAP) brings connectivity to every phase of the farming cycle. TAP is a simple tool to organize, visualize, and automate information, helping farmers make better decisions based on data from across the entire operation. With TAP, we now offer a comprehensive and clear path into digital farm management.

Easily connect consoles to our cloud software

1

Console

Easily connect your XC1 plus console to the Topcon Agriculture Platform.

2

Data transfer

Plug-in a CL-20 or CL-55 Cloudlynk data transfer device to seamlessly transfer data to TAP via cellular networks. Alternatively, use our Wi-Fi dongle or even a classic USB to manually transfer data.

3

TAP

Automatically ingests data through the CL-20 or manually via Wi-Fi or USB, helping you organize, visualize and make better decisions.

Guidance patterns for every application

Straight

Center Pivot

Curved

Custom

Steer smart with relevant features

Steer to Boundary

Generates guidance line from boundary to follow with autosteer to maximize land.

Guidelock

Generates guidance line based upon previous pass coverage so you don't overlap.

Headland Turns

Automatically generate and execute turns at end of rows for seamless transition into next pass.

Flexible subscriptions and powerful addons

TAP Fields

Easily organize, visualize, and decide.

TAP Pro

Streamline transfer and track the fleet.

Satellite imagery

Measure crop and yield health for insights that lower risk.
